

Innovative AND Cost-Effective Software Solutions for Technical and Mission-Critical Applications

Instrumental Software Technologies, Inc.

77 Van Dam Street, Suite 9, Saratoga Springs, NY 12866 518.602.0001 ISTI.COM

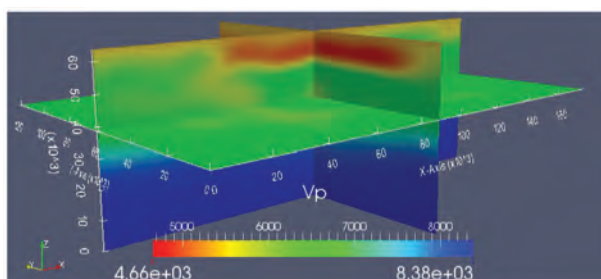

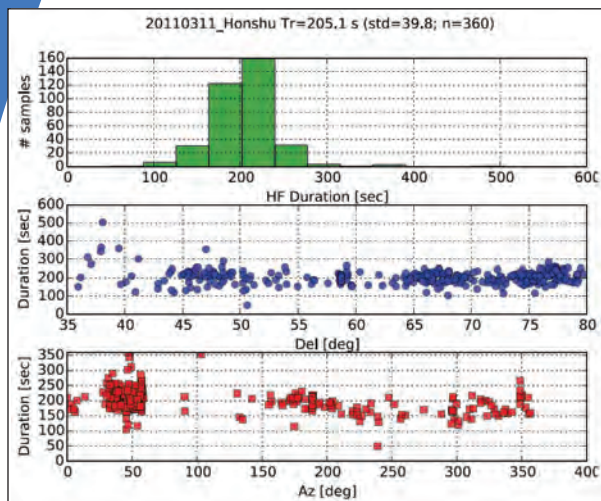

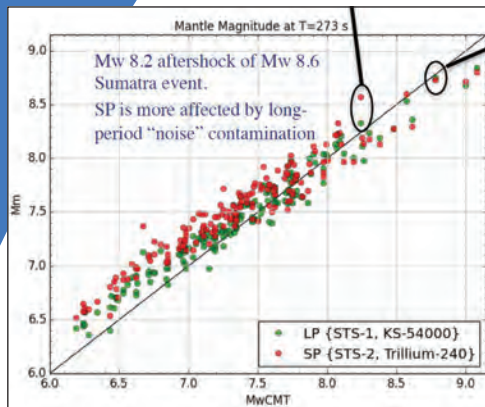

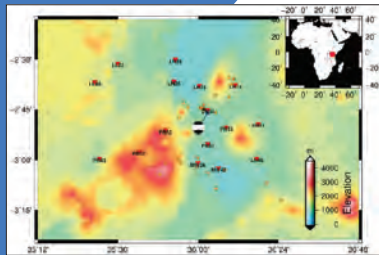

Celebrating our 20th Anniversary in 2018

Our Dedication to Innovation and Reliability has made ISTI a Premier Provider of Custom Monitoring and Scientific Software

MISSION

Instrumental Software Technologies, Inc. (ISTI), founded in 1998, has become a premier provider of custom monitoring and scientific software solutions vital to the world's safety by merging outstanding software engineering practices with cutting-edge scientific research. With deep knowledge of both software and geoscience, we are dedicated to delivering reliable, innovative solutions to a global client base in industry, government, and academia.

Our team of scientists, engineers, and software developers takes pride in developing compelling and cost-effective software and integration solutions for science and engineering applications.

CAPABILITIES

EXPERTISE

IT Planning and Management

SERVICES

- Software architecture design
- Database design
- Communication protocol development
- Project management

Corporate IT Services

- Design and development of distributed software
- Graphical User Interface (GUI) design
- Data acquisition
- Data visualization software
- Automated system monitoring
- Automated emergency alert software

By the Numbers

60

Over 60 countries currently use our software, monitoring, or database solutions

100

Personalized seismic monitoring training provided to over 100 organizations

170

Over 170 global geophysical monitoring networks use our revolutionary software

ISTI Software Solutions

CUSTOM TAILORED TO YOUR NEEDS

The software professionals and scientists at ISTI work hand-in-hand with our clients to engineer the best software product. Our software applications handle small or sizable data sets for the following:

- Physical sciences, including—but not limited to—geophysics; environmental and hazard monitoring; atmospheric and oceanographic sciences; and radionuclide monitoring
- Energy sector, specializing in efficiency and renewable resources or petroleum-based research and exploration
- Emergency alert and broadcast systems as well as state-of-health monitoring to respond to disasters of all types

A full quarter of our staff have earned PhDs in their areas of expertise

We're never satisfied until you're satisfied.

Software Development and System Integration Services

- Near-real-time data acquisition and storage
- System monitoring
- Distributed network processing and visualization including GIS
- Emergency and state-of-health alert notification systems
- Hand-held applications incorporating above services

ISTI will develop and deploy in any programming language and on any operating system, from Windows to Raspberry Pi. Since its inception, ISTI has been a pioneer in Linux-based software applications for the geoscience community, for both in-house and distributed use. ISTI has developed iOS-, Android-, and PDA-based software for mobile applications.

ISTI's executive team is comprised of native English speakers who are fluent in several languages, allowing for smooth transitions of ideas and productive working relationships with our clients.

CORPORATE VALUES

ISTI's values form the foundation for everything we do:

Believe in What We Do

We are passionate about our work and believe that it improves scientific research and helps save lives.

Empower Our People

The key to our success. Our employees have the freedom and support to do quality work in a friendly, stimulating environment.

Do the Right Thing

We strive to be recognized by our customers as honest and trustworthy, a principled company whose work makes a positive difference in the world.
